Work Experience

AUGUST 2021 – PRESENT
SOFTWARE ENGINEER | ACCENTURE INC.

1. **Data Pipeline Project (Personal Project) – Databricks Data Engineer (Present)**
    - Took raw, messy sales files (customers, orders, products, brands, categories and order items) and organized them into three stages: raw, cleaned, and ready for reporting.
    - Found and fixed data problems, including duplicate records, dates in different formats, inconsistent country names, and missing or invalid values, and checked each fix with before-and-after counts.
    - Recorded where each record came from and flagged corrected values, so every number can be traced back and explained.
    - Calculated revenue per order and measured how much of it was unknown due to missing data, so reports show the true picture.

2. **Data & AI Project – Python Developer**

    1. *Registration & User Management System Developer*
        - Developed a secure Registration and Login System using Python and PostgreSQL.
        - Designed and implemented a normalized database schema consisting of 5 interconnected tables for user registration, authentication, login attempts, user activity history, and administrative notifications.
        - Implemented strong exception handling, input validation, account lockout mechanisms, and audit logging for enhanced security and monitoring.
        - Built monitoring capabilities to track user actions, login activities, account status changes, and system events.
    2. *Database & Data Retrieval Development*
        - Developed database modules to retrieve, validate, and manage data from lookup and transactional database tables.

- Optimized SQL queries and backend processes to improve data accessibility and application performance.

3. *Databricks Data Engineer Laboratories*
   - Completed hands-on Databricks Data Engineering laboratory exercises and practical exam.

3. **Splunk & OpenSearch Developer – National Australia Bank (2025 – 2026)**

- Translated and migrated Splunk dashboard panels to OpenSearch, utilizing Vega-Lite, tables, charts, and other visualization tools to accurately replicate and enhance reporting results.
- Designed, developed, and completed end-to-end dashboards, including panel configurations, data queries, and functional integrations to ensure accurate data representation and optimal performance.
- Validated data accuracy and consistency between Splunk and OpenSearch environments to maintain reporting reliability.

4. CloudChaser Developer – GenWizard (2024 – 2025)

- I developed a chatbot using CloudChaser that integrates with Microsoft Teams to support client engagement, streamline communication, and provide quick responses. The assigned project to me specifically focuses on notifying employees of their roll-in and roll-off dates.
- Design responsive and interactive user interfaces.
- Deploy applications on GitLab.
- Optimize website performance and scalability.
- Adding functions using Python, React.js to the system.

5. Splunk Administrative Support – Deutsche Bank (2022 – 2024)

- Install and configure Splunk instances on servers according to requirements.
- Investigated and documented data quality issues with time delay problems, time parsing issue, line breaking issue and etc.
- Troubleshoot and resolve issues related to data ingestion, search performance, and system errors.
- Bitbucket pull request
- Supported production log validation based on client requirements.
- Deployed remediation updates in Dev, UAT, and Prod environments.
- Monitored environment usage and behavior using Splunk Monitoring Console.
- Performed daily checks on environmental health and data model acceleration.
- Validated incident review dashboards within the Splunk Enterprise Security environment.

- Checked assets in the ES Search Head and matched data to NAR ID portal reports.

6. Splunk Developer – Transurban (2021 – 2022)

- Dashboard designing, building, and managing scalable data platforms for analytics and real-time processing.
- Dashboard development using SPL, Python, JavaScript, XML, Python, CSS and jQuery.
- Create dashboards, reports, alerts, and custom visualizations for operational and security analytics.
- Constructing a search query to retrieve the data to visualize and create the classic dashboard in Splunk that built on the top of searches.
- Provides the various visualization elements to represent the data such as charts, graphs and table as well.
- Provides backup support for other team to give solution to their problem.
- Timely checking Service Now incidents tickets and provide immediate solution.
- Finish the task on time that assigned on Jira Board.

Education

- **Bachelor of Science in Information Technology**

Laguna State Polytechnic University – *August 2021*

Certifications

- Databricks Data Engineer Professional
- Databricks Data Engineer Associate
- Splunk Core Certified Power User
- Splunk Enterprise Certified Admin
- Splunk Enterprise Security Certified
- Troubleshooting Splunk Enterprise

Technical Skills

- **Log Onboarding, Dashboarding, Reporting, Alerting & Monitoring**.

- **Configuration & Deployment.**
- **Tools:** Splunk, Python, SQL, Spark, Databricks, OpenSearch, Vega-lite, JavaScript, Python, Linux , SPL, PPL, DQL, DSL
- **Other:** JIRA, Confluence, ServiceNow, Bitbucket, GitLab, Chart Visualization, AI Tools

AWARD

Data and AI Awards

LIKHA - Drives Innovation for Positive Change.

- Created dashboards that consolidate all investigation queries into a single landing page, providing a comprehensive view of the analyzed data.
- Develop a dashboard and alert for other team to monitor data effectively and reduce manual data checking.

Training and Seminars

- Splunk Fundamentals (Part 1 & 2), Accenture – 2021
- Splunk Essentials, Development, Administration Training – 2021
- AWS Cloud Practitioner Essentials – 2022
- Splunk System & Data Admin Training – 2023
- Troubleshooting Splunk Enterprise – 2023
- Databricks Data Engineer Associate – 2026
- Databricks Data Engineer Professional - 2026

Pre-Professional Experience

Intern / On the Job Training (2020 - 2021)

Company: Public Employment Service Office (PESO)

Development of Web-based Public Employment Service Office using Laravel Framework
